

Black Nexus — GitHub Collaboration Guide

Updated: February 10, 2026

Team

Role	Name	GitHub Username	Access Level
Founder / Lead	Justice McKinney	thesetupconcierge	Owner
Partner / Co-Founder	JB Scott	jblaflare-code	Member

GitHub Organization

- **Org Name:** `black-nexus-llc` (*recommended — create at github.com/organizations/new*)
- **Plan:** Free (unlimited private repos, unlimited collaborators)
- **Visibility:** Private repos only (business IP protection)

Repository Structure

Repo	Purpose	Visibility
<code>brand-kit</code>	Logo, colors, typography, templates	Private
<code>black-nexus-site</code>	Marketing website (Vite)	Private
<code>client-projects</code>	Client deliverables & case studies	Private
<code>sops</code>	Standard operating procedures	Private
<code>pitch-decks</code>	Investor/client pitch materials	Private

Branching & Workflow

Git Flow (simplified)

<code>main</code>	← production-ready, protected
└─ <code>dev</code>	← integration branch
└─ <code>feature/xyz</code>	← individual work

Rules

1. **Never push directly to `main`** — always use Pull Requests
2. **Branch naming:** `feature/short-description` , `fix/bug-name` , `docs/update-name`
3. **PR reviews:** At least 1 approval before merging
4. **Commit messages:** Use conventional format: `feat:` , `fix:` , `docs:` , `chore:`

Example Workflow

```
# Start new feature
git checkout dev
git pull origin dev
git checkout -b feature/add-services-page

# Work, commit, push
git add .
git commit -m "feat: add services page with 3-tier pricing"
git push origin feature/add-services-page

# Create PR on GitHub: feature/add-services-page → dev
# After review + approval → merge
# When dev is stable → PR from dev → main
```

Permissions

Setting	Value
Base permissions	Write
Branch protection on main	✔ Require PR, 1 approval
Branch protection on dev	Optional
Force push	✗ Disabled on main
Delete branches after merge	✔ Enabled

Sharing HTML Pages (Free Hosting)

Use **GitHub Pages** for previews and demos:

1. Go to repo → Settings → Pages
2. Source: main branch, /docs folder (or root)
3. URL: <https://black-nexus-11c.github.io/repo-name/>

This is free and works for static HTML/CSS/JS — perfect for site previews, dashboards, and pitch decks shared via link.

Separation of Concerns

Workspace	Owner	Purpose
C:\GitHub Local\Business Ideas\	Justice (local)	Personal workspace, Setup Concierge, WNQ, Career Hub
black-nexus-11c GitHub Org	Justice + JB	Shared Black Nexus business repos

Rule: Black Nexus shared assets live in the GitHub org. Personal/Setup Concierge work stays local and is never pushed to the org.
